We are strengthening our internal Group system to expand our capabilities in all-inclusive risk management.

◆ Risk Management Action Policy

We have identified five major areas where we will make comprehensive efforts under our corporate risk management system. Within the framework of the Sumitomo Wiring Systems Group Basic Principles, the Basic Risk Management Rules clearly stipulate corporate policies that require us to give priority to human life; to strive to improve quality, secure safety and ensure a stable supply of products; and to maintain good relationships with stakeholders, including customers and local communities.

◆ Risk Management Promotion System

Under our Risk Management Promotion System, the Business Continuity Subcommittee of the Risk Management Promotion Committee discusses and examines specific issues. Risk management efforts are promoted by Risk Managers assigned for each division and company and by Risk Management Staff in each department. In addition to daily risk management activities, these designated staffs also work together to address crisis situations.

◆ Risk Communication

We are actively developing effective, organic first-response capacity by consistently sharing information even under normal conditions, and steadily building up our emergency response expertise.

- Risk Manager Training

Risk Managers have acquired basic risk management knowledge with a deeper understanding of their roles.

- Periodic Delivery of Risk Information

By sharing risk management information, we learn from situations that have occurred and then apply this knowledge to future risks.
